

2020 Sectorisation

Arab Health 

By Informa Markets

Together for a healthier world

2020 Sectorisation

The Arab Health 2020 exhibition show floor will be split into sectors according to main product categories to provide:

- Targeted traffic flow
- Fast tracking connections
- Increasing leads

Why sectorisation?

Better quality leads: The traffic within the halls will increase with the relevant audience interested in the product category, increasing quality leads for your business.

More leads: Close proximity of related exhibitors in a hall will increase the number of visitor meetings that can take place in a time frame, versus walking through 64,000+ SQM of exhibition space.

Industry standard: We are bringing the event layout in line with the rest of the industry.

Improve visitor experience: Changing to sectorisation by product categories is in line with how visitors search for exhibitors. Increased satisfaction results in increased time on the show floor, resulting in increased business.

Visitors navigate the show by product categories.

Total mobile app activity was product category filtering.

8 product sectors

Medical equipment & devices

Disposables & consumer goods

Imaging & diagnostics

Preventive & post-diagnostic treatments

Healthcare & general services

Healthcare infrastructure & assets

IT systems & solutions

Orthopaedics & physiotherapy / rehabilitation

Medical equipment & devices

According to a latest Global Medical Device Market Research report for 2018-2022, the global medical device market size is set to achieve an incremental growth of nearly US\$120 billion, registering a compound annual growth rate (CAGR) of more than 5% during the forecast period. A recent report by Dubai Exports further highlighted that the pharmaceuticals and medical equipment sector is one of the six target sectors of the Dubai Industrial Strategy (DIS) 2030. Reportedly, the domestic market will alone be worth about AED 5 Billion in 2021, while the MENA market will reach almost US\$10 Billion by 2021 growing at around 7% per annum.

Disposables & consumer goods

A recent report highlighted that the medical disposables market is anticipated to reach over US\$365.1 billion by 2026. In 2017, drug delivery dominated the worldwide medical disposable industry. Reportedly, Asia-Pacific has been one of the leading contributors to the global market revenue. The increasing number of technologically advanced products and continuous research and development will also continue to drive market growth in this segment.

Imaging & diagnostics

The global medical digital imaging systems market size was valued at US\$ 14.55 billion in 2017. It is likely to expand at a 7.7% Compound Annual Growth Rate (CAGR) between 2019 to 2025. Plus, the global 3D medical imaging market was valued US\$ 15.9 billion in 2017 and is expected to reach US\$ 30.3 billion by 2026, at a CAGR of 8.39% until 2026. Surging demand for effective early diagnostic methods have been instrumental in driving the market. Furthermore, technological advancements and increasing investments and funds by governments, especially in developing countries such as India and China, has been augmenting the market.

Preventive & post-diagnostic treatments

The global preventive healthcare technologies and services market size was valued at US\$ 139.1 billion in 2015 and is projected to grow at a CAGR of over 12 % between 2018 to 2024. This growth can be attributed to the increasing prevalence of lifestyle-associated and other chronic diseases. The report further highlighted that pharmaceutical companies are also taking a keen interest in preventive medicine and consider it to be a growth area in the coming years. For example, as part of the Vision 2030 plan, Saudi Arabia’s Ministry of Health intends to spend up to SAR 23 billion by 2020 to reform primary healthcare.

Healthcare & general services

The emergence of personalised medicine, increased use of technologies, entry of disruptive and non-traditional competitors, the demand for expanded care delivery sites, and revamped payment models are all impacting the financial performance of the healthcare ecosystem. Current Healthcare Expenditure (CHE) in the GCC is projected to reach US\$ 104.6 billion in 2022, registering a CAGR of 6.6% from an estimated US\$76.1 billion in 2017. An Alpen Capital report highlighted that UAE and Oman are likely to witness growth rates of above 9% in the coming years, in anticipation of a fast-growing population, implementation of mandatory health insurance and above regional average medical inflation rates.

Healthcare infrastructure & assets

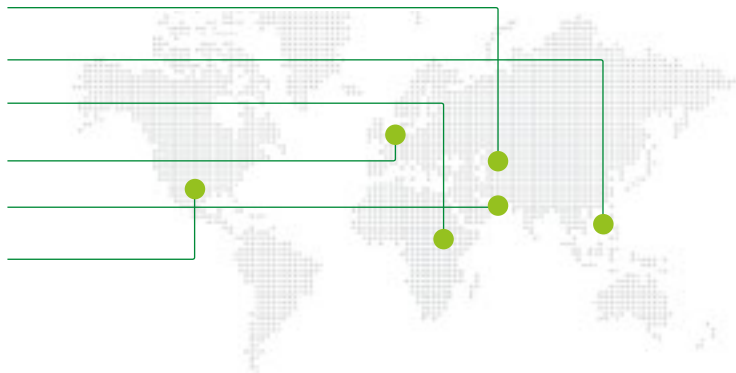

The GCC has over 700 healthcare projects worth US\$ 60.9 billion under various stages of development. More than 85% of the projects, by value, are hospital projects and the rest are clinics and research centres. Of the total, 264 projects worth US\$ 24.7 billion are under the construction stage. Furthermore, the anticipated rise in the number of patients in the region is expected to require 12,358 new hospital beds by 2022, according to an Alpen Capital report. The need for beds is rising particularly in areas of specialised care, long-term care and rehabilitation care.

IT systems & solutions

The governments and private healthcare providers in the GCC are investing heavily in technology implementation and upgrades. Most of the governments are working on electronic medical records (EMR) to monitor and improve health outcomes. For instance, the Dubai Health Authority (DHA) launched a unified electronic system project in February 2016 to cover all hospitals across the Emirate for access to electronic patient records. The project was fully implemented by the end of 2017. According to a survey in hospitals across Saudi Arabia and the UAE, nearly half have adopted a range of Internet of Things-based solutions.

Orthopaedics & physiotherapy / rehabilitation

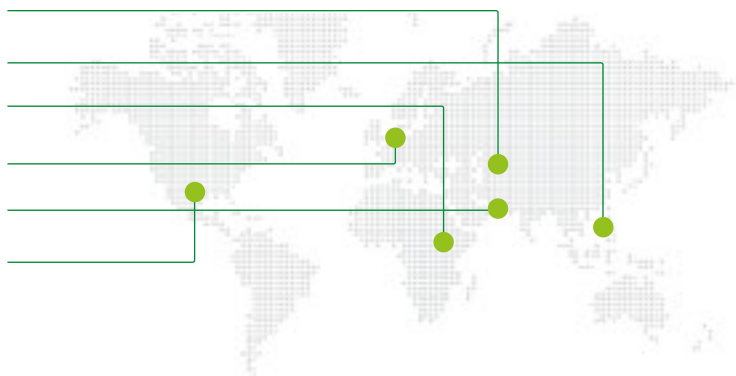

High prevalence of orthopaedic conditions such as degenerative bone disease coupled with early onset of musculoskeletal conditions triggered by obesity and sedentary lifestyle are expected to advance the growth of the market. The rapidly growing lifestyle diseases in the GCC has prompted investments in specialised hospitals and clinics. Such centres are being built with a focus on orthopaedics and offer state-of-the-art technology, enhanced patient-centric care and high-quality standards. Technological advances in 3D printing, robot-assisted surgical procedures, and smart implants further represent high impact driving factors for the global rehabilitation industry.
